Please follow the steps below to reinstall MagicInfo Server:

1) Uninstall MagicInfo Premium Server from your PC using Add/Remove Programs in Windows control panel
2) Uninstall the PostgreSQL database and remove the PostgreSQL folder in Program Files
3) Uninstall all JAVA instances installed on your PC
4) Set User Account Control to never Notify (press CTRL+ R and then type in UAC)
5) Set Secondary Logon to Start automatically in Service.msc
6) Reboot the system
7) Install PostgreSQL (Version **9.3**, latest build)
http://www.enterprisedb.com/products-services-training/pgdownload#windows
*at the end of the installation wizard un-check Run Stack Builder
8) Install latest MagicInfo Server software
9) Open Java in windows control panel, un-check "Check updates automatically" in Update tab.

The supported *OS* is Windows 7 Pro or Windows Server 2008 R2.
I attached the hardware/software requirements and network settings.

On the screen side, when you turn it on in the first time you will need to go through the setup steps,
important to make sure that MagicInfo Premium player is selected (it is by default, but just in case),
and for Server Netwrok settings set server PC IP address,
the standard port number is 7001,
SSL = not use.

Than on server side you will need to activate a trial license for MagicInfo S
and approve the screens in Devices/Unapproved devices section.
